

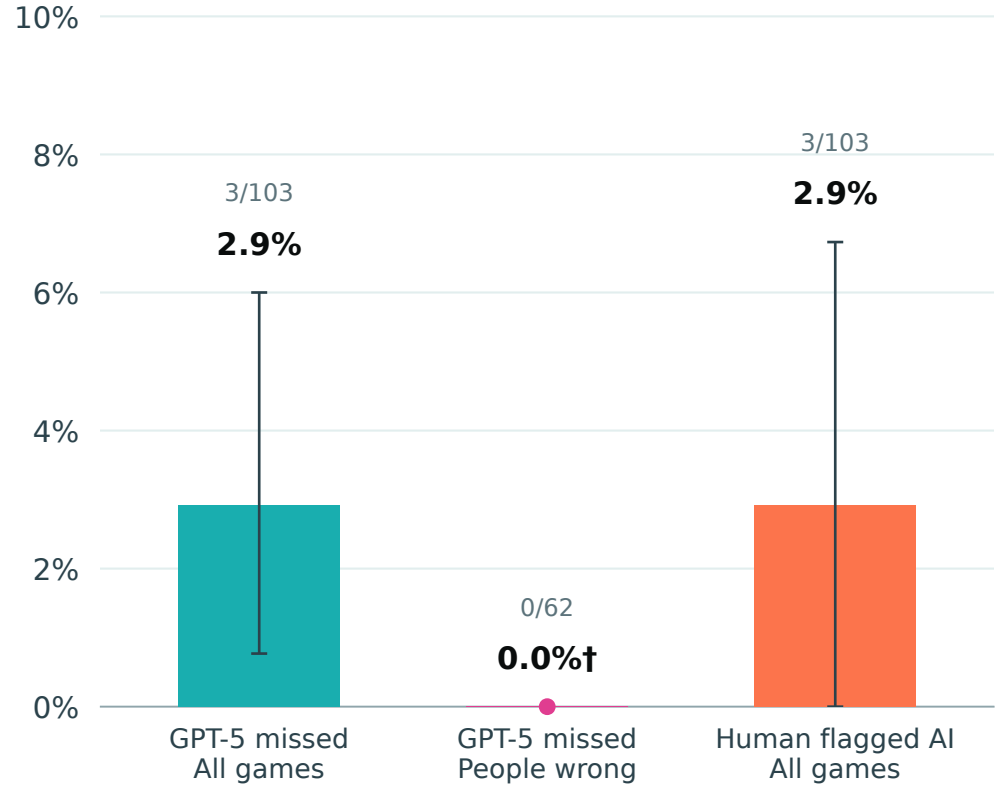
## Pangram comparison score

Comparing the share labelled human-written in each chat.
Human chat higher = 1 point; tie = ½; GPT-5 higher = 0.



## Pangram mistakes

Missed GPT-5 texts or human texts wrongly labelled AI.
Based on the report's verdict; lower is better.

Lines show 90% uncertainty intervals accounting for repeated participants. Five human 'mixed' verdicts are reported separately.

†Zero observed misses does not imply perfect detection; no uncertainty bar is shown. Dashed line: 50% chance score.

103 games. Sources: Jones & Bergen (2026), OSF jk7bw; Pangram 4.1, 19 October 2026.
